

Hands-on-Lab-4 (AWS Academy)

Refer to Lab - 2 Build your VPC and Launch a Web Server

AWS

01:02 ▶ Start Lab ■ End Lab ⓘ AWS Details ⓘ Details ✕

EN-US

The vockey key pair you selected will allow you to connect to this instance via SSH after it has launched. Although you will not need to do that in this lab, it is still required to identify an existing key pair, or create a new one, or choose to proceed without a key pair, when you launch an instance.

39. Configure the Network settings:

- Next to Network settings, choose **Edit**, then configure:
 - Network:** *lab-vpc*
 - Subnet:** *lab-subnet-public2 (not Private!)*
 - Auto-assign public IP:** *Enable*
- Next, you will configure the instance to use the *Web Security Group* that you created earlier.
 - Under Firewall (security groups), choose **Select existing security group**.
 - For **Common security groups**, select ☒ **Web Security Group**.

This security group will permit HTTP access to the instance.

Submit Submission Report Grades

Total score	30/30
Task 1 - VPC created correctly	5/5
Task 2a - New subnets created correctly	5/5
Task 2b - Subnet route table association	5/5
Task 3 - Security group created correctly	5/5
Task 4a - EC2 instance created correctly	5/5
Task 4b - EC2 instance website accessible	5/5
